

Full-stack engineer (React, TypeScript, Node.js) with 2 years building a 460-screen web platform that replaces a legacy Japanese enterprise system. Delivers screens end to end, from spec to customer acceptance, and ranks top 3 for defect resolution on an 11-engineer UAT team (#1 in Q3 2026).

EXPERIENCE

Research & Development Engineer (Full Stack) · Advanced World Solutions, Inc. Jul 2024 – Present

204 of 222 pull requests merged (97%) · 213 UAT defects shipped, zero sent back · 262 screens across 10 of 11 subsystems

- Rebuilt a legacy C#/Java/Oracle system as React + TypeScript and Node.js + Express on a 60+ person bilingual team.
- Built 9 screens end to end, spec to customer acceptance, at 2× the team median delivery rate (top 30% of 61 developers).
- Built features on a multi-tenant Node/Express + Oracle API with Zod contracts, Redis sessions, OAuth2/Passport and JP/EN i18n.
- Resolved 17.5% of all defects across the program; 47 of 51 customer-reported fixes confirmed closed by the customer.
- Fixed root causes in 22 shared UI controls (search, tax, tables, form submission), each fix closing issues on 30+ screens.
- Halved search time on a high-traffic records screen by removing a duplicate query; fixed duplicate CSV imports, Japanese text overflow errors, and failed notifications rolling back saved records.
- Diagnosed differences between the legacy and new systems by reading C#/Java/PL-SQL source, and wrote bilingual JP/EN root-cause reports for the customer.
- Created 6 Claude Code tools (Puppeteer fix verification, evidence video capture, review requests) used daily by the team.
- On a separate project, shipped a QR-code parking system with realtime slot availability (WebSockets, DynamoDB, AWS EC2, SNS/SQS).

Freelance Web Developer · Client websites from scoping to handoff; barangay spot-map app for local government 2024
QA Tester Intern · NOAH Business Applications, enterprise ERP testing Jun – Aug 2023

PROJECTS

Reel · reel.jadebonifacio.dev NestJS · Next.js · PostgreSQL · BullMQ
Job tracker that pulls from 10 job boards every 6 hours, scores postings against user criteria, and tracks applications from Saved to Offer. Queue-based design: each failing source retries independently and reminder emails can't send twice. 170+ tests.

JF & The World · jfdemo.jadebonifacio.dev Next.js · Supabase · Mapbox GL
Collaborative map app, deployed and in active use: journals, photos, realtime sync and push notifications.

ScoutBoard · scoutboard.jadebonifacio.dev NestJS · MongoDB · Redis · Socket.IO · OpenAI
Realtime marketplace with live updates and an LLM endpoint that returns structured listing analysis, cached per listing; CI on every push.

HTTP Monitor · github.com/Jadesuuu/http-monitor NestJS · MongoDB · Redis · Socket.IO
Uptime monitor with a live dashboard and rate limiting; its test suite caught a real outage-handling bug before release.

SKILLS

Languages TypeScript, JavaScript, Python, SQL

Frameworks React, Next.js, Node.js, Express, NestJS, Tailwind CSS, shadcn/ui, Material UI, Zustand, TanStack Query, Formik, Zod, Prisma, i18next

Data PostgreSQL/Supabase, Oracle PL/SQL, MongoDB, DynamoDB, Redis

Cloud & tools AWS (EC2, S3, SNS, SQS), Docker, GitHub Actions, Vercel, Jest, Vitest, Puppeteer, Storybook, Claude Code, Jira
