

JADE MARK ANGELO BONIFACIO

Full Stack Software Engineer

+63 912 387 6713 · jade@jadebonifacio.dev · jadebonifacio.dev · Makati, Philippines · Remote (GMT+8, open to global) · github.com/Jadesuuu · linkedin.com/in/jade-mark-angelo-bonifacio

Full Stack Software Engineer with 2 years on a 460-screen legacy-to-web modernization — 222 PRs at 97% acceptance, top-3 defect resolver with 213 of 223 shipped and zero rework, #1 in the latest quarter. Works across client and API (React 18/Vite and Node/Express on multi-tenant Oracle), plus production-grade personal projects — one live with real users. Ships with tests and CI by default; bilingual EN/JP.

EMPLOYMENT

Research & Development Engineer · Advanced World Solutions, Inc. — Makati City Jul 2024 — Present

- Core full-stack engineer across the 2-year modernization of a 460-screen Japanese property-management platform (legacy C#/Java Struts/Oracle PL-SQL rebuilt as React 18 + Vite + TypeScript / Node.js + Express) on a 60+ engineer bilingual EN/JP team (150+ contributors over the program) — 222 pull requests, 204 merged (97% acceptance), landing in 262 distinct screens across 10 of 11 subsystems (189 client modules, 126 API modules).
- Top-3 defect resolver overall and #1 for the latest quarter (Jul–Sep 2026) on the 11-engineer UAT team — owned 223 defects (17.5% of all defects assigned in the program), shipped 213 (96%), zero returned for rework. On the two customer-filed trackers: 52 owned, 51 shipped, 47 customer-confirmed closed.
- Isolated side-effect failures from primary writes (an external notification failure no longer rolls back a move-out estimate); fixed a double-insert on CSV import; warmed the shared cache at auth bootstrap so tax rates never read zero; guarded in-flight searches against duplicate submission; halved move-out list search time by eliminating a duplicate COUNT query; capped Oracle ORA-12899 byte-length overflows on multibyte Japanese fields.
- Root-caused defects in 22 shared controls (search, tax, unique-text, table atoms, the Formik submit chain) into single-PR fixes closing issues on 30+ screens, then drove horizontal sweeps — separator standardization, byte-overflow guards, decimal-artifact sanitizing — across sibling screens; owned 19 defects on the system's most complex registration screen (lease contracts) plus 5+ each on 12 further screens.
- Delivered pre-UAT feature work on 23 screens: built 9 screens/dialogs end to end (spec → implementation → integration test → customer UAT), ranking top 30% of 61 implementers at 2× the team median, plus a quick-search feature across 13 more screens and a shared subsystem header.
- Built features against a multi-tenant Node/Express + Oracle API with per-request schema switching — Zod-validated request/response contracts, Redis-backed sessions and caching, OAuth2/Passport auth, full JP/EN internationalization (i18next), and all currency math in bignumber.js.
- Diagnosed new-vs-legacy divergences by reading C#/Java/PL-SQL source, reflecting over installed legacy binaries, and reproducing live on both systems; wrote bilingual JP/EN dual-cause root-cause reports to the customer's Redmine.
- Built 6 Claude Code skills/commands (~960 lines) on the team's workflow — Puppeteer end-to-end fix-verification driver, CDP frame-capture evidence-video pipeline, screen-navigation tracer, Slack review-request generator, bilingual return-ticket drafting, manual-verification pack — in daily team use.
- Shipped a QR-code Parking Lot System delivering realtime slot availability — token-authenticated WebSockets, DynamoDB, AWS EC2 hosting, event-driven SNS/SQS notifications.

Freelance Web Developer · Client and local-government projects — remote 2024

- Delivered client websites end to end — scoping and pricing through build and handoff; built a barangay spot-map web app for local-government use.

Quality Assurance Tester Intern · NOAH Business Applications — Makati City Jun — Aug 2023

- Executed test cases for enterprise ERP software and produced QA documentation.

RECENT PROJECTS

Reel — job-hunt tracker with automated ingest and scoring · reel.jadebonifacio.dev2026

NestJS · Prisma · PostgreSQL · Redis/BullMQ · Next.js · TypeScript · Vitest · Docker

- Ingests ten job boards (Hacker News, Remotive, Remote OK, Greenhouse, Lever, Ashby and more) on a six-hourly schedule, scores postings against user criteria, and tracks applications through a Saved → Applied → Interviewing → Offer pipeline with server-enforced transitions and an immutable timeline.
- Queue-based BullMQ architecture: the API only enqueues; a separate worker owns scheduled ingest, per-source fan-out and delayed reminders, so a failing source retries alone. Reminder emails are idempotent by construction — deterministic job ids plus a DB re-check before send.
- Adapter-per-source design with fixture-tested pure parsers behind a single normaliser; 125 unit + 47 e2e tests against real Postgres and Redis; static demo build answers its own API calls in the browser from seeded data.

ScoutBoard — realtime marketplace platform · scoutboard.jadebonifacio.dev2026

NestJS · Next.js · MongoDB · Redis · Socket.IO · OpenAI API

- Realtime with zero refetches: Socket.IO gateway broadcasts into per-entity TanStack Query caches, Redis cache-aside (60s TTL) invalidated on every write; drift-free denormalized counters via atomic \$inc plus a reconciliation cron; per-listing-cached LLM analyst endpoint returning structured JSON; Jest failure-path tests and CI on every push.

HTTP Monitor — uptime monitor · github.com/Jadesuuu/http-monitor2025, rebuilt 2026

NestJS · Next.js · MongoDB · Redis · Socket.IO

- Cron scheduler pings endpoints, persists to MongoDB, and broadcasts over Socket.IO to a live dashboard; Redis cache-aside plus an atomic INCR/EXPIRE rate limiter; Jest suite with an enforced coverage threshold whose failure-path test caught a real outage-handling bug before release.

JF & The World — collaborative map app · jfdemo.jadebonifacio.dev2026 — Present

Next.js · Supabase (PostgreSQL) · Mapbox GL · Edge Functions · Cloudinary · live at us-and-the-world.vercel.app

- Two-user collaborative map with real users: pins, multi-visit journals, and photo galleries on Mapbox GL; Supabase (PostgreSQL) with row-level security, realtime sync, webhook-triggered VAPID web push via Edge Functions, and signed Cloudinary uploads.

SKILLS

Front-End	React (Vite), Next.js (App Router, Server Components), TypeScript, Tailwind CSS, shadcn/ui, Material UI, i18next, Formik/Yup, Storybook
Back-End	Node.js, Express, NestJS (modules, DI, guards/pipes/interceptors, gateways), Zod, OAuth2/Passport, Python
Data	PostgreSQL/Supabase (RLS), MongoDB, DynamoDB, Redis (caching, rate limiting, atomic counters), Oracle/PL-SQL · TanStack Query/Table, Zustand
Cloud & AI	AWS (EC2, S3, SNS, SQS), Vercel, Docker, GitHub Actions · WebSockets, Socket.IO · OpenAI API, Claude Code · Jest, Mocha/Chai, Puppeteer, Chrome DevTools Protocol, Jenkins, Git/PRs, Agile/Scrum, Jira, Figma

EDUCATION

B.S. Computer Science — Cum Laude

Saint Louis University, Baguio City · Aug 2020 — Jun 2024

CERTIFICATES & LANGUAGES

AWS Certified Cloud Practitioner (2026) · PhilNITS (FE) · TOPCIT · Harvard CS50x · NVIDIA Deep Learning Workshop

Filipino (native) · English (highly proficient) · Japanese (JLPT N4 — bilingual EN/JP work experience)
